Steps to run!

* We have to unzip the folder, then we have to save both excel and python file in same folder.

* We have to install thinker pandas openpyxl modules to run.

* A new window will open it asks inputs like name, address, employer id's, hours worked, hourly rate, over time.

* Then click weekly salary botton then its display salary report of employ and then click export it save data in Excel file.

Note: While exporting excel should not open in back-ground.
